

W0. Introduction

W0.1

(W0.1) Give a general description of and introduction to your organization.

Asia Pulp & Paper (APP) Sinarmas is responsible for delivering quality products to meet the growing global demand for tissue, packaging and paper. On any given day, our products find their way into the hands of consumers in various branded forms from all over the world.

Started in 1972 with Tjiwi Kimia producing caustic soda, now we run operations across Indonesia and China with an annual combined pulp, paper, packaging product and converting capacity of over 20 million tons per annum. Today, APP markets its products in more than 120 countries across six continents.

Sustainability has always been at the core of our business. We strive to create products and deliver services responsibly through sustainable and innovative processes at every product life stage. Apart from doing our business, we also improve the livelihoods of the communities around us. Our newest sustainability strategy is detailed in our Sustainability Roadmap: Vision (SRV) 2030. The strategy is broken down into three pillars—Production, Forest, and People. We have set ourselves targets for each of these pillars, intending to drive improvement in processes that concern our business, wider supply chain and environmental sustainability. Vision 2030 also details our efforts and strategy in our continued support of the UN's Sustainable Development Goals (SDGs) and the Paris Agreement on climate change.

Our sustainability strategy has ten targets pillars—Fibre Sourcing, Reforestation, Conservation & Biodiversity, Human Rights & Indigenous People, Community Empowerment, Climate Change, Emissions, Water Management, Solid Waste, and Employee Welfare.

Vision 2030 affects all areas of our business. It is a minutely detailed strategy, with firm targets surrounding sustainability, that uses Company KPIs to monitor progress. Contrasts between Vision 2030 and its predecessor --Vision 2020 --include a focus on a broader range of sustainability issues and tighter alignment with both the UN SDGs and the Paris Agreement, increased stakeholder engagement.

We adhering ESG principles which guide our Forest Conservation Policy and Sustainability Roadmap Vision 2030, we strive to fulfil our commitment to protect forests, support communities, preserve biodiversity and achieve carbon neutrality across our operations by 2030.

Water is a vital ingredient for our production process, we use it in pulp and paper production and to produce steam at various stages of our processes. We recognise our responsibility to protect local water sources at each of our mill sites, we do this by minimising consumption and ensuring the water we return to source meets the highest environmental standards.

Learn more about APP's path to operational excellence by reading our Sustainability Reports and Forest Conservation Policy on: www.asiapulppaper.com

W0.2

(W0.2) State the start and end date of the year for which you are reporting data.

	Start date	End date
Reporting year	January 1 2021	December 31 2021

W0.3

(W0.3) Select the countries/areas in which you operate.

Indonesia

W0.4

(W0.4) Select the currency used for all financial information disclosed throughout your response.

USD

W0.5

(W0.5) Select the option that best describes the reporting boundary for companies, entities, or groups for which water impacts on your business are being reported.

Companies, entities or groups over which operational control is exercised

W0.6

(W0.6) Within this boundary, are there any geographies, facilities, water aspects, or other exclusions from your disclosure?

No

W0.7

(W0.7) Does your organization have an ISIN code or another unique identifier (e.g., Ticker, CUSIP, etc.)?

Indicate whether you are able to provide a unique identifier for your organization.	Provide your unique identifier
Yes, another unique identifier, please specify (Indonesia stock exchange)	INKP, TKIM

W1. Current state

W1.1

(W1.1) Rate the importance (current and future) of water quality and water quantity to the success of your business.

	Direct use importance rating	Indirect use importance rating	Please explain
Sufficient amounts of good quality freshwater available for use	Vital	Important	<p>We need a large water consumption it's about 29m³ per tonne. We also use the production process water as a raw material solvent, and also use it for generating steam, heating, cooling, and cleaning. We closely monitor water for contaminants and recognize that we have a responsibility to protect local water sources at all of our mill sites. We are constantly striving to reduce our water consumption through the use of the latest technology and initiatives.</p> <p>We have a water treatment plant to process water from the river into water that can be used for the production process, the quantity of water taken from the river has a bigger role than the water quality.</p> <p>In the future we will still depend on water resources from the river, however we also maximize the reuse & recycle process to reduce dependence water from the river.</p>
Sufficient amounts of recycled, brackish and/or produced water available for use	Important	Neutral	<p>In 2021 we reused & recycled 14% of our water in processes, the amount of reused recycled water is needed to replace water intake from the river so we categorize it as important.</p>

W1.2

(W1.2) Across all your operations, what proportion of the following water aspects are regularly measured and monitored?

	% of sites/facilities/operations	Please explain
Water withdrawals – total volumes	100%	all our water withdrawals measured and monitored in our water management system. We conduct daily water measurement and for the performance in monthly basis.
Water withdrawals – volumes by source	100%	all our water withdrawals measured and monitored in our water management system. We conduct daily water measurement and for the performance in monthly basis.
Entrained water associated with your metals & mining sector activities - total volumes [only metals and mining sector]	<Not Applicable>	<Not Applicable>
Produced water associated with your oil & gas sector activities - total volumes [only oil and gas sector]	<Not Applicable>	<Not Applicable>
Water withdrawals quality	100%	all our water withdrawals measured and monitored in our water management system. We conduct daily water measurement and for the performance in monthly basis.
Water discharges – total volumes	100%	all our water discharges measured and monitored in our water management system. We conduct daily water measurement and for the performance in monthly basis.
Water discharges – volumes by destination	100%	all our water discharges measured and monitored in our water management system. We conduct daily water measurement and for the performance in monthly basis.
Water discharges – volumes by treatment method	100%	all our water discharges measured and monitored in our water management system. We conduct daily water measurement and for the performance in monthly basis.
Water discharge quality – by standard effluent parameters	100%	all our water discharge measured and monitored in our water management system. We conduct daily for water discharge quality measurement and performance.
Water discharge quality – temperature	100%	all our water discharge measured and monitored in our water management system. We conduct daily for water discharge quality measurement and performance.
Water consumption – total volume	100%	all our water consumption measured and monitored in our water management system. We conduct daily for water consumption measurement and performance.
Water recycled/reused	100%	all our water recycled measured and monitored in our water management system. We conduct daily for water recycled measurement and performance.
The provision of fully-functioning, safely managed WASH services to all workers	100%	We ensure our workers have good access to clean water

W1.2b

(W1.2b) What are the total volumes of water withdrawn, discharged, and consumed across all your operations, and how do these volumes compare to the previous reporting year?

	Volume (megaliters/year)	Comparison with previous reporting year	Please explain
Total withdrawals	345906	About the same	Our water intake about the same. Water profile 2021: 345,906 ML and 2020: 348,181 ML.
Total discharges	226370	Lower	As impacted by reducing water consumption we also reduce water discharge to river. Water discharge in 2021 = 226,370 ML and in 2020 = 233,604 ML.
Total consumption	274634	Higher	Our operation add new equipment in the production process and changes in production grade impacted to water increase. in 2021 = 274,634 ML and in 2020 = 265,976 ML.

W1.2d

(W1.2d) Indicate whether water is withdrawn from areas with water stress and provide the proportion.

	Withdrawals are from areas with water stress	% withdrawn from areas with water stress	Comparison with previous reporting year	Identification tool	Please explain
Row 1	No	<Not Applicable>	<Not Applicable>	WRI Aqueduct	Based on WRI Aqueduct tool, we were mapping our facilities location to water stress area with high and extremely high area. We identified none of our facilities included to water stress area.

W1.2h

(W1.2h) Provide total water withdrawal data by source.

	Relevance	Volume (megaliters/year)	Comparison with previous reporting year	Please explain
Fresh surface water, including rainwater, water from wetlands, rivers, and lakes	Relevant	345906	Lower	Some of our facilities have a discharge pool before water discharged to rivers. The capacity of water pool impacted to the change of water discharge. Water profile in 2021: 345,906 ML and in 2020: 348,181 ML. Decrease 1%
Brackish surface water/Seawater	Not relevant	<Not Applicable>	<Not Applicable>	No water withdrawn from seawater
Groundwater – renewable	Not relevant	<Not Applicable>	<Not Applicable>	No water withdrawn from ground water
Groundwater – non-renewable	Not relevant	<Not Applicable>	<Not Applicable>	No water withdrawn from ground water
Produced/Entrained water	Not relevant	<Not Applicable>	<Not Applicable>	No water import from entrained water
Third party sources	Not relevant	<Not Applicable>	<Not Applicable>	No water import from third party

W1.2i

(W1.2i) Provide total water discharge data by destination.

	Relevance	Volume (megaliters/year)	Comparison with previous reporting year	Please explain
Fresh surface water	Relevant	226370	Lower	in 2021: 226,370 ML and in 2020: 233,604 ML. Decrease 3%
Brackish surface water/seawater	Not relevant	<Not Applicable>	<Not Applicable>	We only able to discharge water to river as government permit
Groundwater	Not relevant	<Not Applicable>	<Not Applicable>	We only able to discharge water to river as government permit
Third-party destinations	Not relevant	<Not Applicable>	<Not Applicable>	We only able to discharge water to river as government permit

W1.2j

(W1.2j) Within your direct operations, indicate the highest level(s) to which you treat your discharge.

	Relevance of treatment level to discharge	Volume (megaliters/year)	Comparison of treated volume with previous reporting year	% of your sites/facilities/operations this volume applies to	Please explain
Tertiary treatment	Relevant	226370	Lower	100%	We use Primary, Secondary and Tertiary as voluntary to get best quality water to discharge. The water discharge is higher from last year due to usage of water is increased. the increase of water consumption caused by the increased of production
Secondary treatment	Relevant	0	About the same	100%	
Primary treatment only	Relevant	0	About the same	100%	
Discharge to the natural environment without treatment	Not relevant	<Not Applicable>	<Not Applicable>	<Not Applicable>	
Discharge to a third party without treatment	Not relevant	<Not Applicable>	<Not Applicable>	<Not Applicable>	
Other	Not relevant	<Not Applicable>	<Not Applicable>	<Not Applicable>	

W1.3

(W1.3) Provide a figure for your organization's total water withdrawal efficiency.

	Revenue	Total water withdrawal volume (megaliters)	Total water withdrawal efficiency	Anticipated forward trend
Row 1	8053000000	345906	23280.891340422	future trend target will be reduced 3%

W1.4

(W1.4) Do you engage with your value chain on water-related issues?

Yes, our suppliers

Yes, our customers or other value chain partners

W1.4a

(W1.4a) What proportion of suppliers do you request to report on their water use, risks and/or management information and what proportion of your procurement spend does this represent?

Row 1

% of suppliers by number

51-75

% of total procurement spend

51-75

Rationale for this coverage

During 2012 and 2013, together with our pulpwood suppliers, we developed a comprehensive scorecard system to enforce and monitor these commitments throughout our supply chain. The scorecard system was developed to measure social and environmental performance of each of our suppliers, in line with regulatory requirements and best practices from internationally recognized Sustainable Forest Management certification standards.

Impact of the engagement and measures of success

Regular assessments using the system enable us to ensure that our suppliers meet our commitment and action plans are developed to address any existing gaps in timely manner.

Comment

W1.4b

(W1.4b) Provide details of any other water-related supplier engagement activity.

Type of engagement

Innovation & collaboration

Details of engagement

Educate suppliers about water stewardship and collaboration

% of suppliers by number

51-75

% of total procurement spend

51-75

Rationale for the coverage of your engagement

APP engage with 40 supplier of forestry concession. Our main raw material is pulpwood then coverage of supplier is about 51%

Impact of the engagement and measures of success

We implement best practices water management for all pulpwood supplier

Comment

W1.4c

(W1.4c) What is your organization's rationale and strategy for prioritizing engagements with customers or other partners in its value chain?

Today, people around the world identify water issues as the most serious sustainability challenges facing the planet. Furthermore, there are increasing concerns about access to water and water pollution have outpaced concerns about other well-recognized sustainability challenges, such as global climate change, natural resource depletion, and biodiversity loss.

Historically, access to water has been an important strategic concern for many companies including APP group, but recent global trends show increased threats to the supply, quality, and reliability of water resources and services, adding substantial immediacy and pressure for business to improve the way it manages water risk.

In response, as chair of the Indonesia Water Mandate Working Group (IWMWG), a special organization under the United Nations Indonesia Global Compact Network, APP has been working to address these water challenges. We have begun developing strategies to mitigate water-related risks and capitalize on opportunities. Some companies are investing in operational efficiencies, such as closed-loop production processes or water recycling. APP and the IWMWG are also exploring alternative technologies, such as biopores, to help mitigate climate-related water issues. Through these international and local collaborations, APP is helping Indonesia press on toward a clean and sustainable water future, one project at a time.

W2. Business impacts

W2.1

(W2.1) Has your organization experienced any detrimental water-related impacts?

No

W2.2

(W2.2) In the reporting year, was your organization subject to any fines, enforcement orders, and/or other penalties for water-related regulatory violations?

No

W3. Procedures

W3.3

(W3.3) Does your organization undertake a water-related risk assessment?

Yes, water-related risks are assessed

W3.3a

(W3.3a) Select the options that best describe your procedures for identifying and assessing water-related risks.

A Water Footprint Assessment has been undertaken in partnership with Nalco, one of the world's leading innovators in clean water technology and solutions, to conduct a company-wide water foot-printing analysis based on guidelines developed by The Water Footprint Network. The assessment will provide a baseline for APP to develop a more detailed roadmap for sustainable water management in its manufacturing processes, including extended plans for water reduction programmes in each mill. Due to the intensive and detailed nature of the assessment, we completed the assessment for all mills by 2015. In addition to the on-going Water Footprint Assessment, all of our mills continue to implement various water improvement programmes, including reduction in water consumption, increase efficiency and water quality enhancement.

During 2012 and 2013, together with our pulpwood suppliers, we developed a comprehensive scorecard system to enforce and monitor these commitments throughout our supply chain. The scorecard system was developed to measure social and environmental performance of each of our suppliers, in line with regulatory requirements and best practices from internationally recognized Sustainable Forest Management certification standards. Regular assessments using the system enable us to ensure that our suppliers meet our commitment and action plans are developed to address any existing gaps in timely manner. In 2012, we began working together with our pulpwood suppliers in implementing the High Conservation Value (HCV) assessment. The assessment, which is also a part of our Natural Forest Moratorium commitment in line with APP Forest Conservation Policy (FCP), is done to recognize areas with outstandingly significant or critically important ecological, social or cultural value. The HCV assessment will enable APP and its suppliers to develop proper management plan for those valuable areas. Water level in peatland area plays a critical role in ensuring hydrology balance in the surrounding ecosystem. To further ensure sustainable water management in our suppliers' area, together with our pulpwood suppliers we develop Best Practice for Peat Management & Monitoring Plan.

W3.3b

(W3.3b) Describe your organization's process for identifying, assessing, and responding to water-related risks within your direct operations and other stages of your value chain.

Water forms an essential part of APP's production processes, which is why we signed up to the UN CEO Water Mandate in 2012.

We announced Forest Conservation Policy (FCP) in February 2013. Both of these commitments set ambitious goals with regard to water management, both within our own operations as well as those in our supply chain. In 2013, we continued to work with various experts and partners to roll out initiatives to help us reach these goals.

Water management in our mills can be divided into two areas; reducing water consumption and maintaining effluent quality from our mill processes. In our supply chain, the focus is on ensuring hydrological balance within the landscape where our pulpwood suppliers' plantations are located, to support the ecological health of the surrounding ecosystem.

In line with the UN CEO Water Mandate principles, APP continues to reach beyond our operations to address community water challenges. APP will continue to seek sustainable water management innovations. We aim to preserve this precious natural resource for the good of our company, the community and the world globally.

W4. Risks and opportunities

W4.1

(W4.1) Have you identified any inherent water-related risks with the potential to have a substantive financial or strategic impact on your business?

Yes, both in direct operations and the rest of our value chain

W4.1a

(W4.1a) How does your organization define substantive financial or strategic impact on your business?

APP investing significant amounts of time, money and resources on initiatives that will not only help the company reduce its water footprint in Indonesia and deliver clean water to the nation's citizens, but also provide jobs and other economic and social opportunities in communities where APP operates. These many initiatives are underway at the local, national and international levels.

On the global front, APP was the first pulp and paper company in Indonesia to join companies around the world in endorsing [United Nations Global CEO Water Mandate](#), a public-private initiative dedicated to developing strategies and solutions that help solve the emerging global water crisis. [According to the United Nations \(UN\)](#), every day millions of tons of inadequately treated sewage and industrial and agricultural wastes are poured into the world's waters, leaving 1 billion people without access to a sufficient water supply. In turn, this water contamination weakens or destroys natural ecosystems that support human health, food production, and biodiversity.

In endorsing the UN mandate, APP is working with governments, UN agencies, non-governmental organizations, and other stakeholders to address the global water challenge. APP embraces the Global Mandate's six core elements: Direct Operations, Supply Chain and Watershed Management, Collective Action, Public Policy, Community Engagement, and Transparency.

APP mills introduced the anaerobic (meaning "without oxygen") treatment process to Indonesia's pulp and paper industry. This water treatment process uses bacteria that do not depend on oxygen to convert contaminants in the water. The technology is unique because during conversion these bacteria produced methane gas which can be used as energy for production. The result: clean water and an efficient source of energy.

In addition, to ensure that the quality of their effluent meets or exceeds both Indonesian and world water quality standards, all of APP's mills treat water with high-efficiency activated sludge and chemical removal processes. And to reduce chemical oxygen demand (COD) levels, each mill employs oxygen bleaching in the water treatment process.

Through continuous innovations of waste water treatment technologies and series of production efficiency, APP strives to reduce its water consumption as well as improve its waste water quality significantly.

W4.1b

(W4.1b) What is the total number of facilities exposed to water risks with the potential to have a substantive financial or strategic impact on your business, and what proportion of your company-wide facilities does this represent?

	Total number of facilities exposed to water risk	% company-wide facilities this represents	Comment
Row 1	10	100	<p>APP has 10 mills that exposed to water risk.</p> <p>Water is essential to the pulp and paper making process, from stock preparation where the pulp is diluted into water for further processing, through to its conversion to steam for process heat and electricity generation. It's a water intensive process, but one that offers the opportunity to recycle and re-use a significant amount of water, reducing the amount of water our mills withdraw from local sources. As one of the first companies in Indonesia that pledged to The UN Global Compact CEO Water Mandate programme, we have a challenging task to ensure that a responsible approach to water management is implemented not only within our operating facilities but also across our supply chain. It is one of our strategic goals highlighted in our Roadmap and a key metric measured by our mills. Our mills focus on two areas; reducing water consumption and maintaining effluent quality from our mill processes. Reduced water consumption is achieved through reducing absolute consumption and increasing water re-use in our processes. A Water Footprint Assessment has been undertaken in partnership with Nalco, one of the world's leading innovators in clean water technology and solutions, to conduct a company-wide water foot-printing analysis based on guidelines developed by The Water Footprint Network. The assessment will provide a baseline for APP to develop a more detailed roadmap for sustainable water management in its manufacturing processes, including extended plans for water reduction programmes in total 10 mills.</p> <p>Our commitment toward sustainable water management also applies to our pulpwood suppliers. These commitments are reflected in our Forest Conservation Policy. During 2012 and 2013, together with our pulpwood suppliers, we developed a comprehensive scorecard system to enforce and monitor these commitments throughout our supply chain. The scorecard system was developed to measure social and environmental performance of each of our suppliers, in line with regulatory requirements and best practices from internationally recognized Sustainable Forest Management certification standards. Regular assessments using the system enable us to ensure that our suppliers meet our commitment and action plans are developed to address any existing gaps in timely manner. In 2012, we began working together with our pulpwood suppliers in implementing the High Conservation Value (HCV) assessment. The assessment, which is also a part of our Natural Forest Moratorium commitment in line with APP Forest Conservation Policy (FCP), is done to recognize areas with outstandingly significant or critically important ecological, social or cultural value. The HCV toolkit identifies 6 types of high conservation values within a forest that needs to be protected; among them are forest areas that provide basic service of nature in critical situations and forest areas fundamental in meeting basic needs of local communities. The HCV assessment will enable APP and its suppliers to develop proper management plan for those valuable areas. Water level in peatland area plays a critical role in ensuring hydrology balance in the surrounding ecosystem. To further ensure sustainable water management in our suppliers' area, together with our pulpwood suppliers we are currently developing Best Practice for Peat Management & Monitoring Plan (PMMP). The Plan will be developed based on assessment and recommendations from internationally recognized team of peat experts. An assessment to find best approach in peatland management will also be a part of our HCV assessment. APP committed to zero new development on peatland, including canal & infrastructure construction, before assessment and best practice recommendation from peat experts are completed. The result of these various assessments; HCV, Scorecard and Peat assessment, will feed into the Integrated Sustainable Forest Management APP and its suppliers are currently developing. The integrated management system will help ensure, amongst others, improved water and watershed management within the concession areas which will also affect water condition in the surrounding landscape.</p>

W4.2

(W4.2) Provide details of identified risks in your direct operations with the potential to have a substantive financial or strategic impact on your business, and your response to those risks.

Country/Area & River basin

Indonesia	Other, please specify (Siak river, Pangabuan river, Baung river, Citarum river, Ciujung river, Cisadane river, Brantas river, Lesti river)
-----------	--

Type of risk & Primary risk driver

Chronic physical	Declining water quality
------------------	-------------------------

Primary potential impact

Increased operating costs

Company-specific description

As many company operates in surrounding of river, it will have a risk to water availability and its quality.

Timeframe

More than 6 years

Magnitude of potential impact

Medium-low

Likelihood

Likely

Are you able to provide a potential financial impact figure?

No, we do not have this figure

Potential financial impact figure (currency)

<Not Applicable>

Potential financial impact figure - minimum (currency)

<Not Applicable>

Potential financial impact figure - maximum (currency)

<Not Applicable>

Explanation of financial impact

Low quality of rivers such as turbidity, conductivity, pH, salinity, etc. will impact to process-water production. Production planning will be changed and the resource to purify the water will increase.

Primary response to risk

Adopt water efficiency, water reuse, recycling and conservation practices

Description of response

We have water treatment and waste water treatment facility with proper design to make sure all water parameters comply with requirements, both process water specification and effluent water. 3R principles are very important and we believe by doing it, our operation can anticipate abnormalities and even develop a contingency plan in term of incoming raw water quality issues.

Cost of response

1000000

Explanation of cost of response

Investment of water and waste water facility together with operational cost

Country/Area & River basin

Indonesia	Other, please specify (Siak river, Pangabuan river, Baung river, Citarum river, Ciujung river, Cisadane river, Brantas river, Lesti river)
-----------	--

Type of risk & Primary risk driver

Chronic physical	Water scarcity
------------------	----------------

Primary potential impact

Increased operating costs

Company-specific description

Continued risks around water quality and availability may have immediate impact to our operations, while other potential risks such as sea water and peat water intrusion might be identified have impact to our operations.

Timeframe

More than 6 years

Magnitude of potential impact

Medium-high

Likelihood

About as likely as not

Are you able to provide a potential financial impact figure?

No, we do not have this figure

Potential financial impact figure (currency)

<Not Applicable>

Potential financial impact figure - minimum (currency)

<Not Applicable>

Potential financial impact figure - maximum (currency)

<Not Applicable>

Explanation of financial impact

Pulp and paper industry use a quite substantial amount of water, therefore the disturbance of water source will effect the operation significantly, which in extreme condition it may stop the operation of the facility.

Primary response to risk

Develop drought emergency plans

Description of response

The main anticipated condition in term of water scarcity is the drought. Therefore drought emergency plans should be developed and supported by other mechanism such as efficiency and 3R implementation as well as working together with government and other stakeholders.

Cost of response

2000000

Explanation of cost of response

This is estimated investment for gap assessment / study, initial mitigation plans up to construction of physical mitigation facility in place (as required).

W4.2a

(W4.2a) Provide details of risks identified within your value chain (beyond direct operations) with the potential to have a substantive financial or strategic impact on your business, and your response to those risks.

Country/Area & River basin

Indonesia	Other, please specify (river surrounding of forestry operations)
-----------	--

Stage of value chain

Supply chain

Type of risk & Primary risk driver

Chronic physical	Seasonal supply variability/inter annual variability
------------------	--

Primary potential impact

Constraint to growth

Company-specific description

Our supply chain operations impacted by water level in forestry area. Flooding and drought during unusual condition will impacted to the growth of tress as well as pulpwood supply to pulp & paper operations.

Timeframe

More than 6 years

Magnitude of potential impact

Medium-low

Likelihood

Likely

Are you able to provide a potential financial impact figure?

No, we do not have this figure

Potential financial impact figure (currency)

<Not Applicable>

Potential financial impact figure - minimum (currency)

<Not Applicable>

Potential financial impact figure - maximum (currency)

<Not Applicable>

Explanation of financial impact

Unusual condition such as drought and flooding will impact to pulpwood production and supply to pulp & paper operations.

Primary response to risk

Supplier engagement	Promote investment in infrastructure and technologies for water saving, re-use and recycling among suppliers
---------------------	--

Description of response

- Our supplier implement procedures to manage water levels in variety season
- Research on plantation tress which more resistant to flooding and drought
- investment of infrastructure to keep water level

Cost of response

500000

Explanation of cost of response

- cost of research on plantation tress which more resistant to flooding and drought
- cost of investment of infrastructure to keep water level

W4.3

(W4.3) Have you identified any water-related opportunities with the potential to have a substantive financial or strategic impact on your business?

Yes, we have identified opportunities, and some/all are being realized

W4.3a

(W4.3a) Provide details of opportunities currently being realized that could have a substantive financial or strategic impact on your business.

Type of opportunity

Efficiency

Primary water-related opportunity

Improved water efficiency in operations

Company-specific description & strategy to realize opportunity

Water is a vital ingredient for our production process, we use it in pulp and paper production and to produce steam at various stages of our processes. We recognize our responsibility to protect local water sources at each of our mill sites, we do this by minimizing consumption and ensuring the water we return to source meets the highest environmental standards.

We conduct water balance studies at all mills and use external water experts to conduct regular sampling checks too to ensure our wastewater is safe for return to source. In 2021 we reused & recycle 14% of our water in processes, meaning we use less fresh water. At the end of 2021, we had achieved a water intensity reduction of 10%, as compared to a 2018 baseline. In 2021 we are on the track with our SRV commitment with the reduction 26% for COD and BOD.

Estimated timeframe for realization

More than 6 years

Magnitude of potential financial impact

Medium-high

Are you able to provide a potential financial impact figure?

No, we do not have this figure

Potential financial impact figure (currency)

<Not Applicable>

Potential financial impact figure – minimum (currency)

<Not Applicable>

Potential financial impact figure – maximum (currency)

<Not Applicable>

Explanation of financial impact

The impact will mainly be gained from the cost of water intake from surface water source.

W5. Facility-level water accounting

W5.1

(W5.1) For each facility referenced in W4.1c, provide coordinates, water accounting data, and a comparison with the previous reporting year.

Facility reference number

Facility 1

Facility name (optional)

PT. Indah Kiat Pulp & Paper Perawang Mills, PT. Pindo Deli Perawang Mills, PT. Univenus Perawang.

Country/Area & River basin

W6. Governance

W6.1

(W6.1) Does your organization have a water policy?

Yes, we have a documented water policy that is publicly available

W6.1a

(W6.1a) Select the options that best describe the scope and content of your water policy.

	Scope	Content	Please explain
Row 1	Company-wide	Description of business impact on water Reference to international standards and widely-recognized water initiatives Company water targets and goals Commitment to align with public policy initiatives, such as the SDGs Commitment to water-related innovation Commitment to water stewardship and/or collective action Commitment to safely managed Water, Sanitation and Hygiene (WASH) in the workplace Commitment to safely managed Water, Sanitation and Hygiene (WASH) in local communities	APP announced environmental stewardship policy in 2012 which including water efficiency and water management. It is also supported by our mills that certified ISO 14001, water management and efficiency is put on environmental policy that is required by that certification scheme. We began the Water Sanitation & Hygiene (WASH) started in 2013 the project by surveying the needs in our local community. This programme aims to build latrines and water supply systems, dig and cover sewage systems, create waste management systems, and educate on basic hygiene.

W6.2

(W6.2) Is there board level oversight of water-related issues within your organization?

Yes

W6.2a

(W6.2a) Identify the position(s) (do not include any names) of the individual(s) on the board with responsibility for water-related issues.

Position of individual	Please explain
Chief Executive Officer (CEO)	The Sustainability Committee Board is headed by APP's CEO, members include APP's Deputy Chairman, Managing Director, Business Unit heads and the Director of Sustainability and Stakeholder Engagement. The Sustainability Committee Board meets monthly, reviewing performance, overall direction and strategy, as well as any issues raised from stakeholders.
Chief Sustainability Officer (CSO)	Chief Sustainability Officer at Corporate Level holds the responsibility for water-related issues.
Chief Operating Officer (COO)	The COO (Mill Head) of each mill holds the responsibility for water-related issues.

W6.2b

(W6.2b) Provide further details on the board's oversight of water-related issues.

	Frequency that water-related issues are a scheduled agenda item	Governance mechanisms into which water-related issues are integrated	Please explain
Row 1	Scheduled - some meetings	Monitoring implementation and performance Overseeing major capital expenditures Providing employee incentives Reviewing and guiding annual budgets Reviewing and guiding business plans Reviewing and guiding strategy Reviewing and guiding corporate responsibility strategy Reviewing innovation/R&D priorities Setting performance objectives	The Sustainability Committee Board is headed by APP's CEO, members include APP's Deputy CEO, Managing Director, Business Unit heads and Chief Sustainability Officer. The Sustainability Committee Board meets monthly, reviewing performance, overall direction and strategy, as well as any issues raised from stakeholders.

W6.2d

(W6.2d) Does your organization have at least one board member with competence on water-related issues?

	Board member(s) have competence on water-related issues	Criteria used to assess competence of board member(s) on water-related issues	Primary reason for no board-level competence on water-related issues	Explain why your organization does not have at least one board member with competence on water-related issues and any plans to address board-level competence in the future
Row 1	Yes	have experienced as Mill Head who manage mill operations and handle water related issues.	<Not Applicable>	<Not Applicable>

W6.3

(W6.3) Provide the highest management-level position(s) or committee(s) with responsibility for water-related issues (do not include the names of individuals).

Name of the position(s) and/or committee(s)

Chief Sustainability Officer (CSO)

Responsibility

Assessing water-related risks and opportunities

Frequency of reporting to the board on water-related issues

Quarterly

Please explain

Quarterly reported to KPI achievement reports. Other situational conditions are also discussed.

Name of the position(s) and/or committee(s)

Chief Executive Officer (CEO)

Responsibility

Assessing water-related risks and opportunities

Frequency of reporting to the board on water-related issues

As important matters arise

Please explain

The Sustainability Committee Board is headed by APP's CEO, members include APP's Deputy CEO, Managing Director, Business Unit heads and Chief Sustainability Officer. The Sustainability Committee Board meets monthly, reviewing performance, overall direction and strategy, as well as any issues raised from stakeholders

W6.4

(W6.4) Do you provide incentives to C-suite employees or board members for the management of water-related issues?

	Provide incentives for management of water-related issues	Comment
Row 1	No, and we do not plan to introduce them in the next two years	

W6.5

(W6.5) Do you engage in activities that could either directly or indirectly influence public policy on water through any of the following?

Yes, direct engagement with policy makers

W6.5a

(W6.5a) What processes do you have in place to ensure that all of your direct and indirect activities seeking to influence policy are consistent with your water policy/water commitments?

Water is a vital ingredient for our production process; we use it in pulp and paper production and to produce steam at various stages of our processes. We recognize our responsibility to protect local water sources at each of our mill sites, we do this by minimizing consumption and ensuring the water we return to source meets the highest environmental standards.

We conduct water balance studies at all mills and use external water experts to conduct regular sampling checks too to ensure our wastewater is safe for return to source. In 2021 we reused & recycle 14% of our water in processes, meaning we use less fresh water. At the end of 2021, we had achieved a water intensity reduction of 10%, as compared to a 2018 baseline. In 2021 we are on the track with our SRV commitment with the reduction 26% for COD and BOD. Water use audits have been conducted at the mill since 2015, working backwards from water discharge to water source; the engineering team assess the water balance of the process and identify improvement areas.

We are also member of Pulp Paper Association in Indonesia which is the board for communication and negotiation with Authorities and Stakeholder concerning water related matters.

W6.6

(W6.6) Did your organization include information about its response to water-related risks in its most recent mainstream financial report?

No, and we have no plans to do so

W7. Business strategy

W7.1

(W7.1) Are water-related issues integrated into any aspects of your long-term strategic business plan, and if so how?

	Are water-related issues integrated?	Long-term time horizon (years)	Please explain
Long-term business objectives	Yes, water-related issues are integrated	5-10	<p>Vision 2030 was launched in 2020, and it acted as our comprehensive strategy for sustainability from 2021 until 2030. Vision 2030 covers an increased range of issues, and is aligned with the UN Sustainable Development Goals, and the Paris Agreement on Climate Change. Water is part of a vital ingredient for our production process; we use it in pulp and paper production and to produce steam at various stages of our processes. We recognize our responsibility to protect local water sources at each of our mill sites, we do this by minimizing consumption and ensuring the water we return to source meets the highest environmental standards.</p> <p>APP is also fully committed to supporting the SDGs. To devise our strategy of meeting these goals, we utilised the UN's SDG Compass tool to create a detailed map of APP's and our wider supply chain's activities and how these directly support the SDGs.</p>
Strategy for achieving long-term objectives	Yes, water-related issues are integrated	5-10	<p>Vision 2030 was launched in 2020, and it acted as our comprehensive strategy for sustainability from 2021 until 2030. Vision 2030 covers an increased range of issues, and is aligned with the UN Sustainable Development Goals, and the Paris Agreement on Climate Change. Water is part of a vital ingredient for our production process; we use it in pulp and paper production and to produce steam at various stages of our processes. At the end of 2021, we had achieved a water intensity reduction of 10%, as compared to a 2018 baseline</p>

W7.2

(W7.2) What is the trend in your organization's water-related capital expenditure (CAPEX) and operating expenditure (OPEX) for the reporting year, and the anticipated trend for the next reporting year?

Row 1

Water-related CAPEX (+/- % change)

0

Anticipated forward trend for CAPEX (+/- % change)

5

Water-related OPEX (+/- % change)

0

Anticipated forward trend for OPEX (+/- % change)

0

Please explain

No significant investment during reporting year as no significant challenge faced.

W7.3

(W7.3) Does your organization use scenario analysis to inform its business strategy?

	Use of scenario analysis	Comment
Row 1	No, but we anticipate doing so within the next two years	Some of our operation are integrated to raw material (wood), therefore landscape approach assessment is very critical for identification of long term water security. The analysis started in 2019.

W7.4

(W7.4) Does your company use an internal price on water?

Row 1

Does your company use an internal price on water?

Yes

Please explain

Beside water volume, process water price also contribute as a driving factor in controlling the water usage. The price consists of price of water intake paid to the Authority and the processing cost (energy, chemical, labor). The total price is then divided by total volume, to gain the unit price of water, USD/m3.

W7.5

(W7.5) Do you classify any of your current products and/or services as low water impact?

	Products and/or services classified as low water impact	Definition used to classify low water impact	Primary reason for not classifying any of your current products and/or services as low water impact	Please explain
Row 1	No, but we plan to address this within the next two years	<Not Applicable >	Important but not an immediate business priority	Our operations rely heavily on water, which is used for steam generation, heating, cooling, and cleaning. We are constantly working to conserve water by reusing and recycling it as much as possible. We recognize that water scarcity and water stress is a serious climate risk, and we adopt Board-level responsibility in tackling this problem. The majority of our mills are located near bodies of water and ensures easy access. Water scarcity, on the other hand, can also impact our operations, particularly during the dry season. Thus, we must closely monitor water quality, for example, by collaborating with local governments to establish minimum water standards and conducting periodic testing to ensure compliance. Given the importance of water scarcity and the risk that it may pose to our business, we conduct appropriate risk assessments and integrate their findings into our business planning.

W8. Targets

W8.1

(W8.1) Describe your approach to setting and monitoring water-related targets and/or goals.

	Levels for targets and/or goals	Monitoring at corporate level	Approach to setting and monitoring targets and/or goals
Row 1	Company-wide targets and goals Activity level specific targets and/or goals Site/facility specific targets and/or goals	Targets are monitored at the corporate level Goals are monitored at the corporate level	Target and goals set up by analyze baseline performance and projection for coming years. We were also considering investment and stakeholder requirement.

W8.1a

(W8.1a) Provide details of your water targets that are monitored at the corporate level, and the progress made.

Target reference number

Target 1

Category of target

Product water intensity

Level

Company-wide

Primary motivation

Reduced environmental impact

Description of target

Achieve 10% reduction in water intensity by 2021, based on 2018 baseline

Quantitative metric

% reduction per unit of production

Baseline year

2018

Start year

2020

Target year

2030

% of target achieved

100

Please explain

Water intensity decreased 10% in 2021 compared to 2018 baseline. In 2021 we maintained our commitment to ensure all our water returned to source was 26% below national and regional limits for COD and BOD.

W8.1b

(W8.1b) Provide details of your water goal(s) that are monitored at the corporate level and the progress made.

Goal

Providing access to safely managed Water, Sanitation and Hygiene (WASH) in local communities

Level

Basin level

Motivation

Corporate social responsibility

Description of goal

Providing clean water services for the community
Implementing community-based sanitation and waste management
Build latrines and water supply systems
Dig and cover sewage systems

End year

2021

Progress

The programme at Pindo Deli Karawang aims to improve the community's quality of life, after discussions with the village community, the programme output changed from providing clean water services for the community to providing clean water supplies and services for schools. Work was carried out in three schools where nine new handwashing facilities were installed, each unit containing three sinks. The schools also needed new toilets due to their poor condition or complete absence. Work went ahead well, and to ensure that its positive impact continues.

At Tjiwi Kimia mill So far, the project has seen several of achievements, showing it was a good coordination between Habitat, Tjiwi Kimia (APP), and the village government. We built trust by opening a dedicated office in the village hall, enabling open, two-way communication about the project, and the community members were established as the first line of support, making it easy to seek help or information if needed. As a result, Tjiwi Kimia was recognised for its efforts by the village community which further improve the relationship between the community and the company. In total, we have installed clean water house connection for 130 families, toilet for 26 families, provide WASH capacity building for 190 communities and 1 unit communal latrine in Singkalan Village.

IKS's program to improve communities' access to safe drinking water. IKS constructed 9 wells in 2021, each of well able to supply an average of 50 households.

Goal

Providing access to safely managed Water, Sanitation and Hygiene (WASH) in local communities

Level

Motivation

Shared value

Description of goal

Since 2019, APP worked with the SPEAK Indonesia Foundation (SPEAK) to provide clean water and sanitation for the local community. One area of the project was Kutaneagara Village, located near PDK mill, where basic sanitation facilities were built. Training and education on the importance of hygiene and sanitation were also provided under a Community-based Total Sanitation Programme (STBM). The programme's implementation saw a rise in demand for toilet construction. This stimulated economic growth for the STBM group that was formed when the program was implemented. Most of the members of the STBM group are members of the previously existing BUTEKA handicraft SMEs. STBM group involved in construction of toilet facilities, education and socialisation, as well as developing a recycling and handicraft business

Progress

Since 2019, APP has partnered with the SPEAK Indonesia Foundation (SPEAK) to provide clean water and sanitation services to the Kutaneagara Village community. Training and campaigns for a Clean and Healthy Lifestyle, as well as the development of family toilets, are all part of the support. The development of family toilet facilities continues today in collaboration with the Kutaneagara Village Community-Based Total Sanitation (STBM) team. By the end 2021, this initiative has constructed a total of 140 family toilets. This demonstrates that public awareness of the importance of a Clean and Healthy Lifestyle is growing. PDK will continue providing support in Kutamekar village, which is also adjacent to the mill location.

W9. Verification

W9.1

(W9.1) Do you verify any other water information reported in your CDP disclosure (not already covered by W5.1a)?

Yes

W9.1a

(W9.1a) Which data points within your CDP disclosure have been verified, and which standards were used?

Disclosure module	Data verified	Verification standard	Please explain
W8 Targets	Company wide goal and achievement	AA1000AS	We verified our water related target and achievement through Sustainability Report verification

W10. Sign off

W-FI

(W-FI) Use this field to provide any additional information or context that you feel is relevant to your organization's response. Please note that this field is optional and is not scored.

No additional information

W10.1

(W10.1) Provide details for the person that has signed off (approved) your CDP water response.

	Job title	Corresponding job category
Row 1	Chief Sustainability Officer (CSO)	Chief Sustainability Officer (CSO)

W10.2

(W10.2) Please indicate whether your organization agrees for CDP to transfer your publicly disclosed data on your impact and risk response strategies to the CEO Water Mandate's Water Action Hub [applies only to W2.1a (response to impacts), W4.2 and W4.2a (response to risks)].

Yes

SW. Supply chain module

SW0.1

(SW0.1) What is your organization's annual revenue for the reporting period?

	Annual revenue
Row 1	8000000000

SW1.1

(SW1.1) Could any of your facilities reported in W5.1 have an impact on a requesting CDP supply chain member?

Yes, CDP supply chain members buy goods or services from facilities listed in W5.1

SW1.1a

(SW1.1a) Indicate which of the facilities referenced in W5.1 could impact a requesting CDP supply chain member.

Facility reference number

Facility 4

Facility name

PT. Indah Kiat Pulp & Paper Serang Mills

Requesting member

Philip Morris International

Description of potential impact on member

Our mill not operated in high risk of water source thus the impact is very low.

Comment

SW1.2

(SW1.2) Are you able to provide geolocation data for your facilities?

	Are you able to provide geolocation data for your facilities?	Comment
Row 1	Yes, for all facilities	

SW1.2a

(SW1.2a) Please provide all available geolocation data for your facilities.
